Continuation of 11. does NOT place the application in condition for allowance because: With respect to claim 5 and its rejection under 103(a) as being unpatentable over Balan et al. US 2003/0024489 in view of Kozo JP 200-102702, the applicant argues that Balan and Kozo do not teach the limitation of operating a controller to hold the degree of vacuum in a vacuum vessel constant. The examiner notes that operating a controller to hold a vacuum vessel constant is an intended use for the claimed controller. The references would be required to teach a controller that was capable of functioning in such a manner. Balan teaches "[t]he vacuum control permits the vacuum to be maintained at desirable levels" and a desirable level which the controller is capable of operating a vacuum at is "about 2 to 3 inches of mercury." Balan US 2003/0023389, 0034. Therefore Balan teaches a controller that is capable of holding a vacuum at a desirable level that is relatively constant. More broadly Balan teaches that the controller can operate the vacuum at a desired level and therefore provides the functionality enabling the controller to set a desired level to be constant and then operate the vacuum at said desired level..
